

An Absolutely Remarkable Thing-Hank Green

The Carls.

They appeared out of nowhere. No warning, no explanation. 10 feet tall sculptures, looking like they were encased in shiny metal armour.

Stumbling upon one at 3 in the morning certainly gave April May a surprise. Like any young tech-savvy millennial, April immediately began to vlog the discovery, posting it online before going to bed that morning. By the time she awoke, it was a viral sensation, and April was a celebrity.

As more and more Carls are discovered, April plummets headfirst into a mystery of massive proportion, making her question everything she thought she knew and costing her more than she ever could have imagined.

April needs to determine what exactly the Carls are, but more importantly, what do they want?

This book is a crazy science-fiction foray into conspiracy theories, extraterrestrials, and the power that social media exerts over the public. It expertly carries the reader along for the ride, helplessly engaged in the dynamics of identity, celebrity, and conspiracy. Green explores gender and sexual identity seamlessly within the bigger story of the novel. With this debut novel, Green joins his brother John atop the New York Times Bestseller list. And the best part? It's got a sequel!
